

# HAWKSOFT 6 RELEASE NOTES

Released 06/18/2026

| Category       | Type        | Release Notes                                                                                                                                                                                  |
|----------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Certificates   | Bug         | Corrected an issue that caused the Description of Operations template in the COI wizard to retain text formatting when pasting - only the plain text should be pasted.                         |
| Client Viewer  | Enhancement | The Nature of Business tab now has a copy all button on each of the Descriptions of Operations.                                                                                                |
| Commissions    | Enhancement | Added the ability to view the total agent commission paid for all agent paid statements, and the option to include the totals when exporting the Agent Paid Statement Details or Summary list. |
| Commissions    | Enhancement | Added the current policy # column to commission reports.                                                                                                                                       |
| Desktop        | Bug         | Corrected an issue with Word correspondence templates that caused them not to open with a certain Windows update.                                                                              |
| Desktop        | Enhancement | The Nature of Business tab has been relocated to before the Locations tab instead of after.                                                                                                    |
| Download Certs | Enhancement | Certified Homeowners downloads from Rockingham Mutual Insurance Co.                                                                                                                            |
| Logs           | Enhancement | When hiding all log filters on a client, we now show a larger warning to indicate why no logs are shown.                                                                                       |
